

Appendix 1A. Field measurements, and concentrations of reduction-oxidation (redox)-sensitive constituents

and nutrients from groundwater samples, seep 3-4W reactive mat pilot test area, West Branch
Canal Creek, Aberdeen Proving Ground, Maryland, August 2004-January 2005

[ft bls, feet below land surface; $\mu\text{S}/\text{cm}$, microsiemens per centimeter at 25°C; ppm, parts per million;
 mg/L , milligrams per liter; $\mu\text{g/L}$, micrograms per liter; <, less than; deg C., degrees Celsius;
CMT, continuous multilevel channel; PZ, piezometer; SS, stainless steel piezometer with inner
Teflon tubing; Mini, mini porewater samplers; DS, diffusion sampler; a '2' after a site number
indicates a duplicate sample; Dashes indicate that no samples were collected.]

"PTC" samples are groundwater samples collected from multi-level piezometers

"PTZ" samples are groundwater samples collected from individual piezometers

"PTB" samples are groundwater samples collected from in-mat passive diffusion samplers

"PTN" samples are groundwater samples collected from below-mat mini sand-pack screens
